CAREER OBJECTIVE

Enthusiastic and detail-oriented Full-Stack Web Developer seeking a fresher position. Eager to leverage strong coding skills in Python and SQL database management to contribute to innovative software solutions.

TECHNICAL SKILLS

Languages: Python, JavaScript, SQL

Frontend: HTML5, CSS3, React.js, React Router, Vite, Axios, Fetch API

Backend: Django, Django REST Framework (DRF), JWT Authentication, RESTful APIs, API Development, CRUD Operations, Authentication, Authorization, MVC/MVT Architecture

Databases: MySQL, SQLite,

Tools : GitHub, Version Control, VS Code, Postman, OOP, DBMS

PROJECTS

Hotel Room Booking Application | *React.js, Django REST Framework, MySQL*
(GitHub)

APR – 2026

- Developed a full-stack hotel room booking application using React.js, Python, Django REST Framework, and SQLite, with user registration and authentication.
- Built RESTful APIs for room management, availability, and booking operations, including database models for users, rooms, and occupied dates.
- Integrated and deployed the React frontend with the Django backend, tested APIs using Postman, and resolved CORS and authentication issues.

AI Duplicate Ticket Detector – Support Desk | *React.js, Django REST Framework, MySQL*
(GitHub)

JUN – 2026

- Built a Django REST Framework and OpenAI API-powered support ticket system using AI text embeddings and cosine similarity, cutting duplicate ticket submissions by an estimated 30–40% in testing across a sample ticket dataset.
- Implemented semantic search with sentence-transformer embeddings and a debounced React UI, surfacing similar tickets in under 1 second as the user types.
- Designed an admin clustering dashboard grouping related tickets by semantic meaning, improving visibility into trending support issues.

AI Resume Analyzer | *React.js, Django REST Framework, MySQL*
(GitHub)

AUG – 2026

- Built an AI-powered resume analyzer with Django REST Framework and React that scores resume-job fit (0–100 scale) and generates targeted improvement suggestions using LLM-based prompt engineering with structured JSON output.
- Engineered PDF text extraction and prompt design to reliably parse unstructured resume data into match scores, skill-gap analysis, and actionable suggestions across varied resume formats.
- Built a history-tracking feature enabling users to measure resume improvement across multiple job applications, with match-score trends stored and retrieved via REST endpoints.
