

AI Resume Analyzer & Job-Match Scorer

Upload a resume, paste a job description, and get an AI-generated match score, missing skills, and specific suggestions to improve your resume — especially useful when the match is weak.

OPEN SOURCE

DJANGO + REACT

OPENAI

What It Does

Match Score

AI-generated score comparing your resume against any job description.

Missing Skills

Identifies exactly which skills are absent from your resume.

Actionable Suggestions

3–6 specific recommendations to improve your resume, especially when the match is weak.

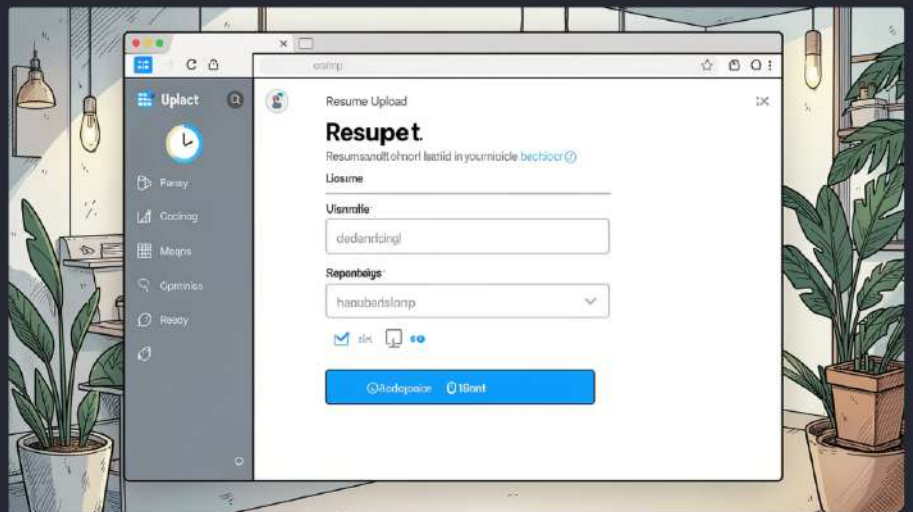

Frontend Setup

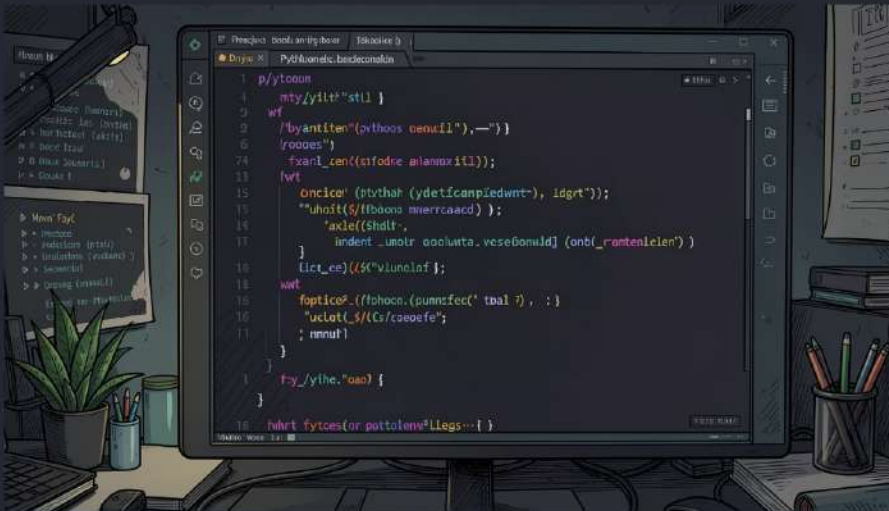

React + Vite

```
npm create vite@latest resume-analyzer-frontend -- --template react
cd resume-analyzer-frontend
npm install
npm run dev
```

Copy the `src/` files from the repo into your new Vite project, then run the dev server.

Backend Setup

Django Project

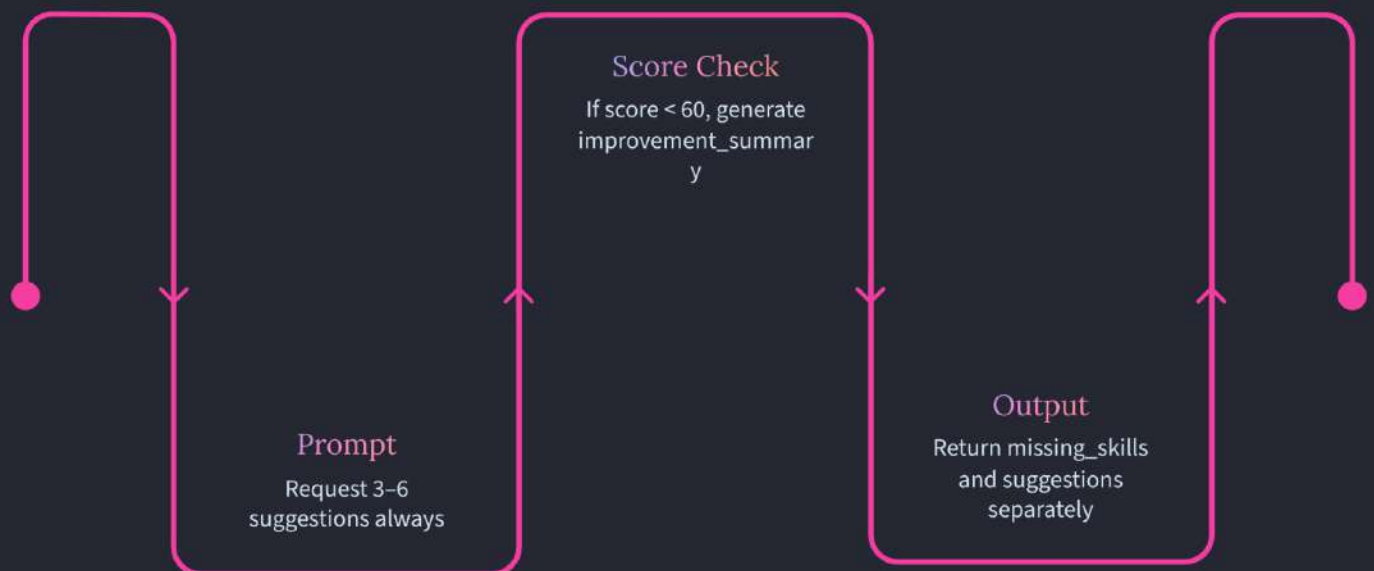

```
django-admin startproject  
resume_analyzer  
cd resume_analyzer  
python manage.py startapp  
analyzer  
python manage.py startapp  
accounts  
pip install -r requirements.txt  
python manage.py migrate  
python manage.py runserver
```

OpenAI Key

```
export  
OPENAI_API_KEY=your_key_here
```

Set your OpenAI key before running the server.

How the Weak-Match Logic Works

Separating `missing_skills` from `suggestions` in the data model keeps the frontend UI clearer and is a strong talking point for interviews about structuring AI output.
